Ladies & Gentlemen:

We must continue to promote the best technology and give the opportunity to those who want the freedom to innovate in all areas of business and industries. Let's keep the courts and the politicians out of technology especially in this critical time "The New World Economic". If AOL wants to continue to play this role in promoting policy (and politics) over technology especially as they have done in the last three years and contributing to the impeding of new technology. Let us remember man is the maker of his destiny and we are all guilty if allowed it to happen. Why should the American people be punished to pay for the legal cost of this platform?

As we all know AOL has promised to open up their instant messenger as Microsoft has done, so that we all can have a platform to build services for it, but has AOL complied? NO. They say one thing and do another.

Microsoft has done bad things in the past but is not the evil some people make it out to be. If you had studied them in some depth, you'd understand that.

Microsoft has done great things for the United States Economic and World Economic and their contribution to ordinary people is the real story.

Let's keep our head over water and we should continue to review all the facts and put everything on the balanced (World Economic) before we make the biggest mistake in this new World Economic.
